

AI Prompt for Nano Bana for Architecture Model 12

Ultra-realistic, photorealistic cinematic 8K render where the uploaded image building is visible in two layers of perspective. Through a large sleek-profile window with rain drops, the uploaded image building is seen fully built, surrounded by trees and ambient natural light. In the foreground, a modern architect's desk is placed near the window, with a 1:7 scale physical miniature model of the uploaded image building displayed on a polished wooden base. A plan printout of the uploaded image, with handwritten notes "Interiors_by_jamil," is spread across the desk under a focused hanging light, surrounded by sketch pens, material samples, a coffee cup, a small desk plant, and a wooden pen stand engraved "Design Template Hub."

On the pavement outside the window, one architect and two site engineers are standing near the real uploaded image building, holding printed plans and discussing the design. Their presence reflects softly on the wet pavement, blending interior workspace storytelling with exterior site action. Ambient light play, soft glow reflections, and cinematic atmosphere merge the worlds of concept, miniature, and real construction, making the uploaded image central in all layers.
