

AI Prompt for Nano Bana for Architecture Model 13

Ultra-realistic, photorealistic cinematic 8K render of a modern architectural exhibition space. The uploaded image building is presented as a large framed print on the wall, while in the center stands a 1:7 scale physical miniature model of the uploaded image, encased in a glass showcase on a polished pedestal. Around the model, architects, critics, and students observe and discuss, holding printed plans of the uploaded image. On sleek side tables, plan sheets with handwritten notes "Interiors_by_jamil," material boards, sketch pens, coffee cups, and a wooden pen stand engraved "Design Template Hub" are neatly displayed. Soft museum lighting with warm spotlights highlights the model and plans, creating a cinematic storytelling moment of architecture being celebrated and showcased.
