

AI Prompt for Nano Bana for Architecture Model 21

Ultra-realistic cinematic 8K render of a prestigious design exhibition hall with high ceilings, polished concrete floors, and dramatic gallery lighting. At the center of the space, on a raised pedestal under spotlights, sits a 1:7 scale miniature model of the uploaded image building crafted in hyper-detail. Behind it, giant LED walls project rotating renderings of the uploaded image, floor plans, exploded diagrams, and construction visuals. The architect in formal attire and two site engineers in semi-formal dress with helmets in hand stand beside, explaining the concept to a group of visitors, architecture students, and critics taking notes and photos. Surrounding walls showcase material boards with glass, wood, and stone samples, mood boards, and technical sketches pinned for display. The ambient lighting and buzz of conversation create a professional, world-class architectural showcase.
