

AI Prompt for Nano Bana for Architecture Model 22

Ultra-realistic cinematic 8K render of a minimalist modern art gallery with white walls, soft ceiling spotlights, and polished marble floors. A large framed architectural photograph of the uploaded image building hangs prominently, glowing under directed lighting. Below it, on a sleek glass plinth table, sits a 1:7 scale miniature of the uploaded image, surrounded by hand-drafted plans, colored concept sketches, handwritten notes "Interiors_by_jamil," a small potted desk plant, and a steaming espresso in a porcelain cup. The architect and two site engineers stand off to the side in mid-discussion, gesturing at the model while gallery visitors observe thoughtfully. The floor reflections of people, artwork, and the model create a layered cinematic depth, blending the atmosphere of an art exhibition with architectural storytelling.
