

AI Prompt for Nano Bana for Architecture Model 23

Create an ultra-realistic, photorealistic 3D isometric render of the uploaded image of the building, styled exactly like the reference architectural model. Use the same elevated three-quarter isometric camera angle with precise perspective, showing the front façade and one side of the building clearly. Position the miniature model on top of detailed architectural floor plan drawings to replicate the professional studio presentation. Ensure high detailing of windows, railings, stairs, interiors, and furniture, with clean edges and sharp geometry. Apply soft studio lighting with natural shadows, balanced highlights, and cinematic depth of field to match the exact reference style. The output should look like a premium architectural miniature presentation with perfect realism, refined textures, and blueprint context.
