

AI Prompt for Nano Bana for Architecture Model 26

Create a hyper-realistic cinematic render using the uploaded image of the human and the uploaded image of the building. Keep the uploaded human exactly the same — same face, hairstyle, expression, and posture — without any changes. Place the uploaded building as a 1:7 scale architectural model on the desk in front of the human, with precise detailing.

The background must be fully covered with large glowing computer screens, similar to the reference image. These screens should display architectural drawings, wireframes, or 3D renders of the same uploaded building.

Use dramatic studio lighting with warm desk illumination on the model, subtle highlights on the human's face, and cool ambient tones. Apply a cinematic gradient glow in the background with deep blues and purples, blending softly for a futuristic, professional mood. Depth of field should blur the screens slightly, keeping the human and scale model as the sharp focal points.
