TIMBER

A timeless element in interior design and architectural structures. Timber's versatility makes it an excellent choice to craft rustic aesthetics as well as more contemporary expressions in modern homes. It brings an organic feel that is unmissable, and difficult to replicate.

PLYWOOD BOARDS

Crafted from cross-laminated layers of wood veneer, plywood boards offer balanced strength and dependable stability. Each layer is bonded under controlled pressure to create a solid sheet that resists warping while preserving the natural character of the timber.
We partner with Magnus Plywoods, to provide a range of structural plywood solutions ; Our range includes BWP, BWR, MR and Shuttering Plywoods.

GRADES POSSIBILITY

- Fire Retardant
- Boiling Water proof
- Boiling Water Resistant
- Commercial Grade

FOR CONCRETE SHUTTERING WORK

- Film Faced Shuttering Plywood:
-
- 30 Kg densified board
-
- 34 Kg densified board

LAMINATED DOORS

Laminated Doors are crafted using high-pressure laminates to provide a durable, scratch-resistant surface that is easy to maintain, making them ideal for busy households. Veneer Doors feature a thin layer of real wood applied over a core material, offering the elegance and warmth of natural wood at a more affordable price. Both types are meticulously crafted to blend seamlessly with a wide array of home interiors.

PRE-HUNG DOORS

A pre-hung door is a set of the Door Shutter, Door Frame, Architrave, Hardwares (locks, hinges, stoppers) and Installation. We take care of the production, to the on-site fitting, ensuring a clean, smooth and hassle free process for larger construction sites.

These doors can be selected from our pre-existing designs or can be custom made to your designs.

BESPOKE SOLID WOODEN DOORS

VENEER EDGE BAND

Veneer edge banding is crafted from thin slices of various natural wood. Designed to finish and protect exposed panel edges, it delivers a seamless solid-wood appearance while enhancing durability and concealing core materials for a clean, refined finish.

LAMINATED VENEER LUMBER (LVL)

Laminate Veneer Lumber is made when thin wood veneers are bonded with adhesives under heat and pressure, with grains running parallel for high strength. This material is used in places where structural integrity is crucial. It is used in structural components like beams, headers, studs, and frames. Engineered for structural performance, making it a viable alternative to solid timber.

LIVE EDGE WOODEN TABLE

Reinforcing our philosophy of "Innovation", we strive to give old and naturally uprooted trees a new home by crafting naturally stunning tabletops out of their trunks. The live edges give them a more raw and authentic look that fits perfectly into both rustic and more modern spaces.

STAIRCASE TREADS

Wooden Staircase Treads are manufactured from solid wood, precision-machined for strength, stability, and uniform thickness. Designed to withstand continuous foot traffic, they provide a durable and reliable walking surface while preserving the natural warmth of wood. Used in residential and commercial staircases, they are available in multiple wood species and finishes, making them suitable for both modern and traditional interiors.

Available in 30mm, 18mm, 11mm & 6mm thickness

SOLID-WOOD MILLED PANELS

Exotic Veeners

We offer premium, natural, and designer wood veneer sheets widely used for premium furniture, wall paneling, and cabinetry.

Our range incudes, Natural Veneers ; Dyed Veneers ; Designer Hybrid Veneers ; Metallic Veneers ; Textured Veneers

Exotic veneer's natural grain structure are shaped over decades. They unique to every sheet giving each surface a depth and character that no engineered material can replicate. Sourced from sustainably harvested forests across the globe, that individuality carries through to every application, from bespoke furniture and architectural interiors to precision automotive finishes, integrating seamlessly without conceding warmth or elegance. Where natural resilience meets considered craftsmanship, your space doesn't just look extraordinary — it endures that way.

Designer Laminates

Designer laminates engineered surface structure. — precision-layered for consistency and resilience, delivering a depth of finish and range of expression that stands apart from conventional surfacing materials. The result is a surface chosen by architects and interior designers who demand both versatility and longevity — where considered engineering meets your creative vision, exactly as you imagined it.

CLADDING PRODUCTS

The design freedom offered by wooden cladding is truly unmatched. It integrates seamlessly into any environment or architectural style, bringing warmth, character, and elegance. Timber's natural resilience and excellent strength-to-weight ratio allow it to withstand significantly higher stresses and movement, ensuring durability over time. The result is a long-lasting, contemporary finish that transforms your space exactly the way you envision it.

Panels, Boards and more

CEMENT BOARDS

Cement boards (or fiber cement boards) are durable, moisture-resistant, and fireproof composite sheets made from Portland cement, silica sand, and cellulose fibers. They are heavily used as tile backers, exterior cladding, fire-rated walls, and mezzanine flooring as a superior, rot-proof alternative to plywood or gypsum.

Vnext

BISON PANEL
One board. Infinite uses.

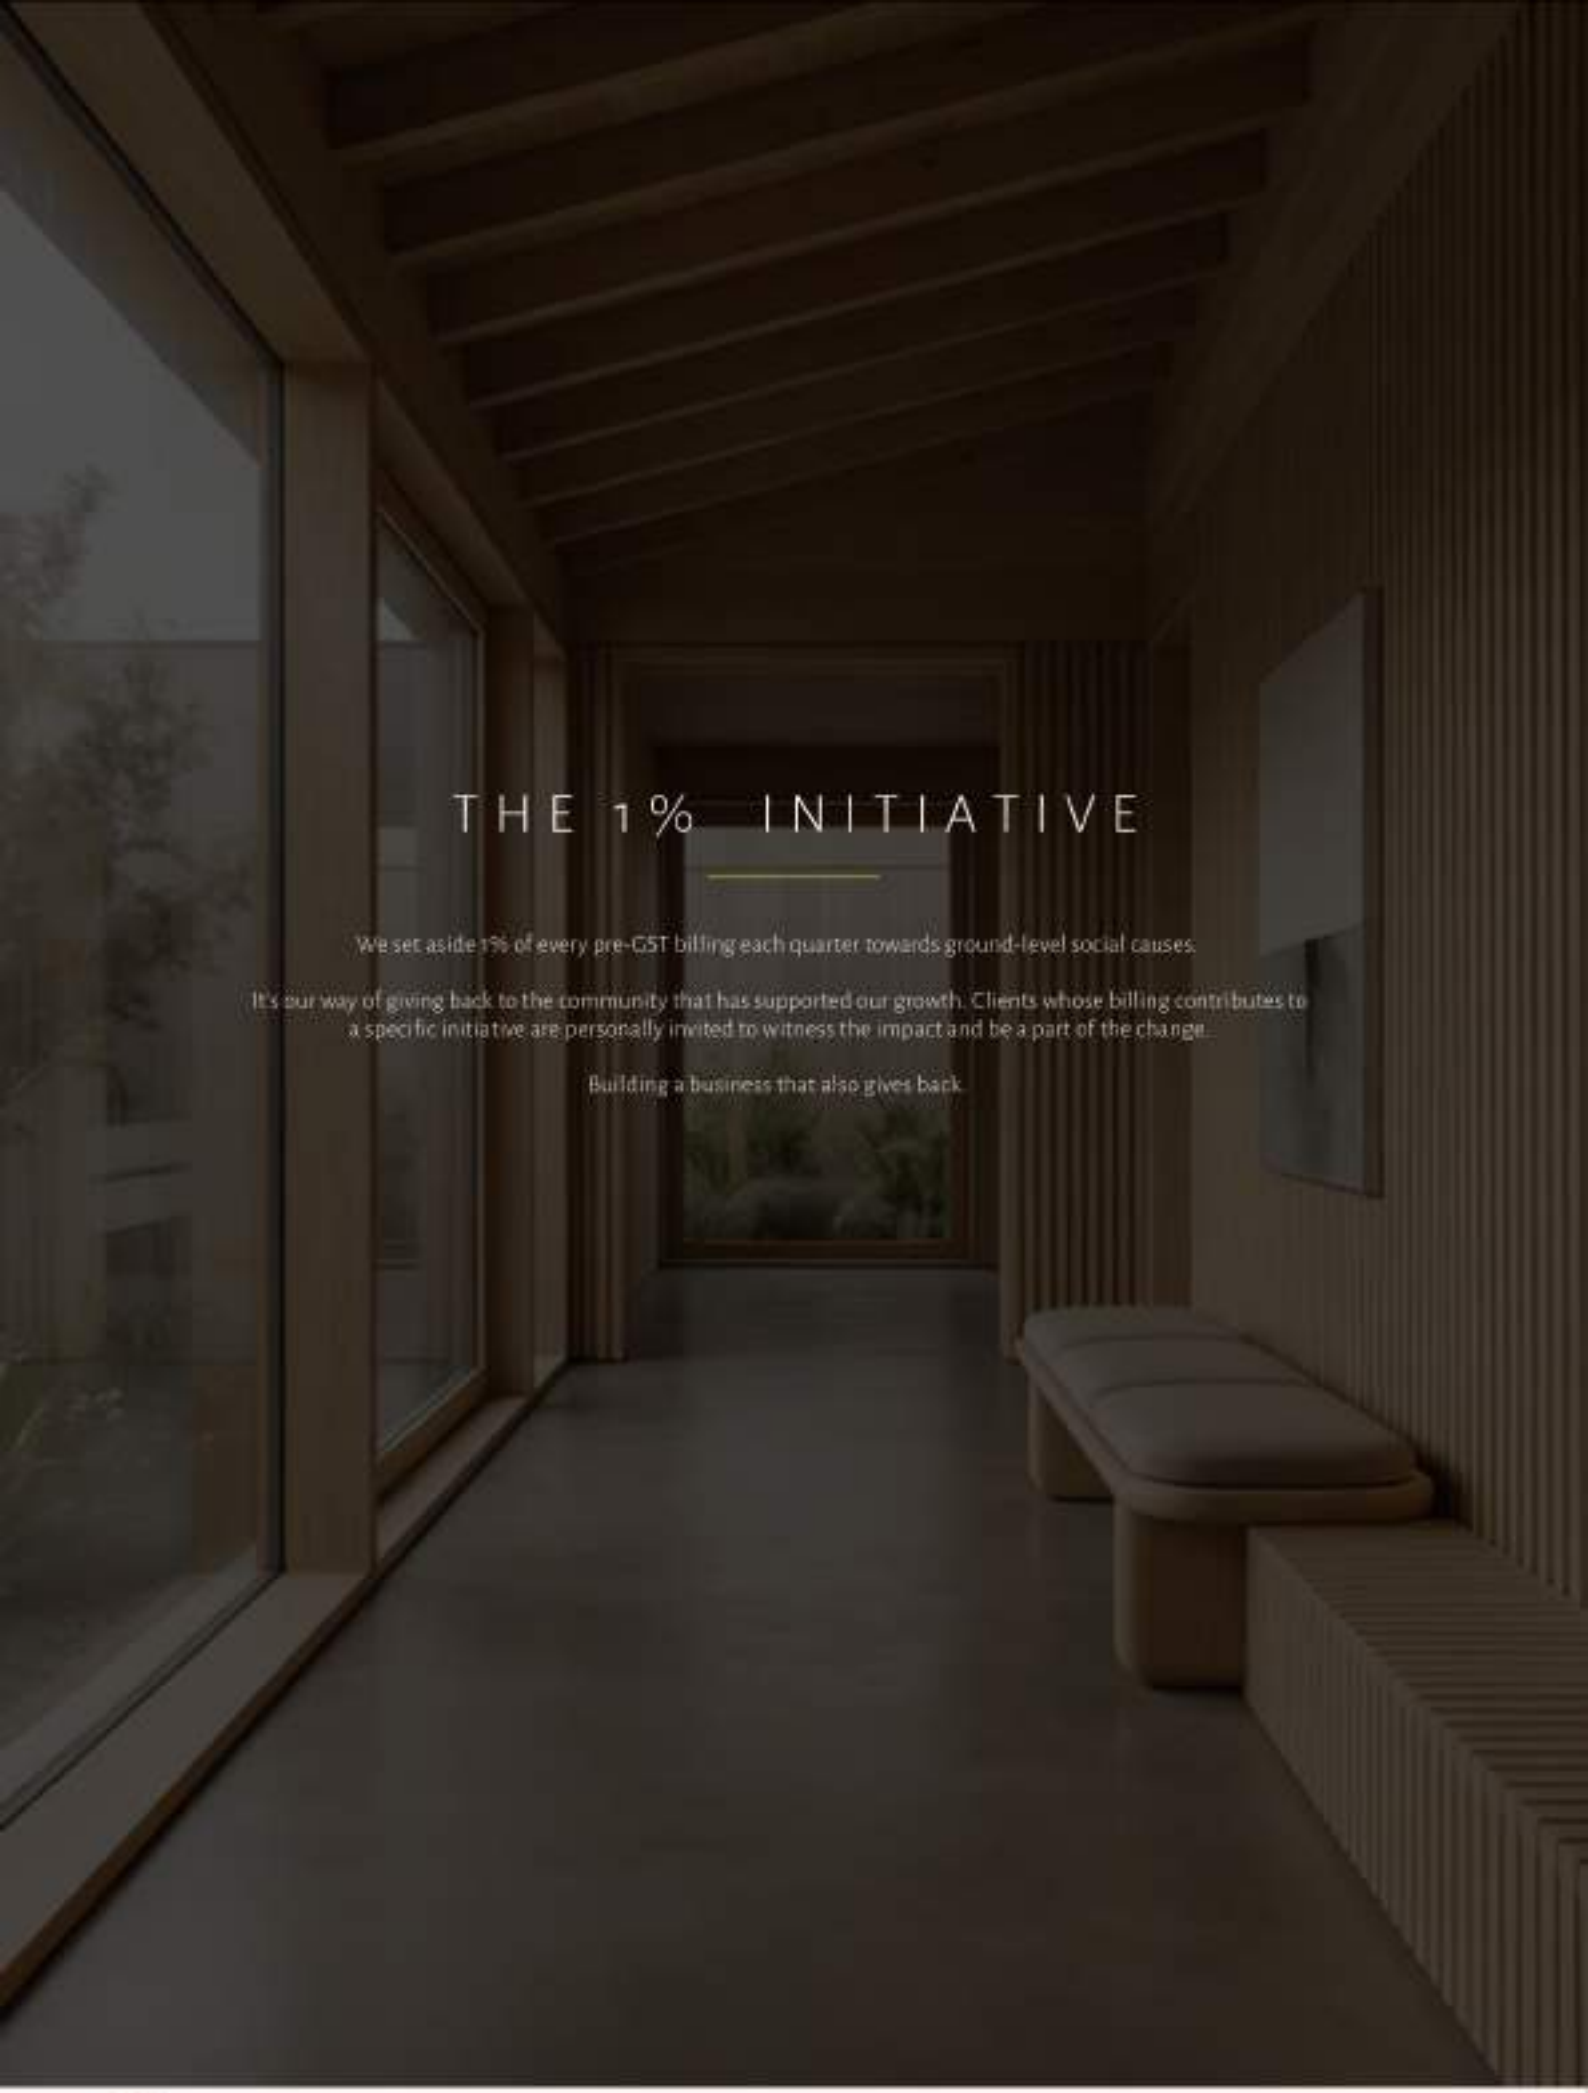

WOOD-PLASTIC COMPOSITES

It is a sustainable, hybrid material made by blending wood fibers with thermoplastic resins (like PVC, PE, or PP) and small amounts of additives. It provides the natural aesthetic of wood combined with the superior durability, moisture resistance, and low-maintenance properties of plastic.
